About Me

From taking apart broken electronics as a kid to building Arduino projects in middle school, I've always been driven by one instinct; understanding how things work and finding better ways to solve them. That curiosity never left.

Today it shows up as a strong bias toward building: I learn fast, move quickly, and thrive in environments where the goal is to ship something that works.

Work Experience

Shipin | Feb 2026 - Present

Founding Member

As a founding member of an Ankara-based builder community, I play a key role in organizational planning, community strategy, and the technical execution of web development projects.

Hacettepe Statistics and Data Science Society | Jan 2026 - Present

Education Coordinator

Sourced educational content ideas for stage and lab events, coordinated with speakers, and led the organization of a data visualization competition as the primary organizer.

Freelancer - Upwork | Jul 2025 - Dec 2025

Python Developer

Some projects I worked on:

Developed an AI-powered chatbot that guides product creators through idea exploration, generates live summaries, and converts approved concepts into technical specification documents for developers.

Built an on-demand data scraping and manipulation system for a non-technical client, enabling them to collect and process specific datasets independently without engineering support.

Data Science and ML Hub | Jul 2025 - Sep 2025

Content Creator

Created and published weekly LinkedIn content focused on AI and data trends.

Project

MewInsight (In Development)

Building a solopreneur tool that validates and find product ideas by analyzing Reddit pain points. Turning unstructured community discussions into actionable product insights. Conducted initial market validation by onboarding the first 10 early adopters to the waitlist, facilitating user discovery sessions to refine product features.

ProfRating

Identified a gap in the Turkiye market .Students had no transparent way to evaluate professors before choosing courses. Built and launched a professor review platform with a 2-person team. 1,500+ users in the first 3 days of launch.

AI-Powered Children's Story Maker

Solo Project Built a web app that generated personalized children's stories using AI. Discontinued after analyzing user behavior and discovering that users preferred listening to pre-written stories over generating custom ones .

Skills

- **Technical & Tools:** SQL, Python, Data Analysis, Git, FastApi ,PyTorch, Scikit-learn, LangChain, Linear, Basic Figma, Vibe Coding.
- **Product Management:** Backlog Prioritization, User Story Mapping, Market Research, Agile, Scrum
- **Soft Skills:** Leadership, Analytical Thinking, Problem Solving

Education

Hacettepe University | 2024-2028

Statistics

Developing a strong foundation in statistical thinking, probability, and data analysis ,applied directly to product decisions.

- Active Member of the Debate Society
